DETAILED ACTION

Response to Amendment

1. Amendments to claims 28 and 30 have been entered in the above-identified application. Claims 14 and 29 are cancelled. **Claims 1-13, 15-28, and 30 are pending.**

The indicated allowability of claims 1-13 and 15-27 is withdrawn in light of the new rejection presented below. Any inconvenience to the Applicants is regretted.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-13, 15-28, and 30 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15 of U.S.

Art Unit: 1773

Patent No. 6,926,955. Although the conflicting claims are not identical, they are not patentably distinct from each other.

U.S. Patent No. 6,926,955 claims a thermal interface material, comprising: a phase change polymer; a solder material having a melting temperature approximately between 100 and 250.degree. C.; and a plurality of thermally conductive non-fusible particles, the solder material, wherein the fusible filler is a metal alloy in the range of approximately 10-90% by weight of the thermal interface material and the fusible filler is selected from the group consisting of In, InBi, InSn, BiSn, PbSn, SnAg, InPbAg, InAg, InSnBi, InGa SnBiZn, SnInAg, SnAgCu and InPb. The non-fusible particle filler claimed to be selected from the group consisting of glass fiber, graphite fibers, carbon fibers, boron nitride, aluminum oxides, zinc oxide, alum

Accordingly, it would have been obvious to one having ordinary skill in the art to replace the solder material claimed in U.S. Patent No. 6,926,955 with a solder particle having a melting temperature below 300°C.

Response to Arguments

3. Applicant's arguments with respect to claims 1-13, 15-28, and 30 have been considered but are moot in view of the new ground(s) of rejection.
